

# SP - Vertical Spin Dryer

Product description and models

## Product description

SP refers to our range of vertical centrifuges. SP centrifuges are designed to provide guaranteed quick drying.

Thanks to the arrangement of the conveyor blades, the force with which the product collides on the walls are reduced, reducing the wear of the latter.

The use of soundproofing materials was avoided by increasing the thickness of the AISI304 stainless steel sheet. The addition of hinges to the opening doors facilitates maintenance and cleaning for change of production.

Other benefits of our SP centrifuges are:

- Internal basket for separating water from the product with removable sectors
- Electric fan for the extraction of humidity

In addition, thanks to the use of accessories, the field of application can be extended to washing systems for flakes and other ground products.

## Models

Baracco produces 4 models of SP centrifuges, which generally must be combined with the corresponding pelletizer.

The table below lists the models with their respective technical characteristics.

Model	Stages	kW	Production
<b>SP5</b>	2 + 1	1,3	50 - 400
<b>SP10</b>	2 + 1	4,2	400 - 1500
<b>SP20</b>	2 + 1	7,9	1500 - 3000
<b>SP30</b>	2 + 1	11,4	3000 - 6000
